Apresentação

Em Santa Catarina as principais lavouras permanentes de frutas representaram mais de 54 mil hectares colhidos com 13 mil produtores e produção de 1,3 milhão de toneladas no setor frutícola na safra 2015/16.

No estudo, as principais frutas (variedades) catarinenses são determinadas a partir da quantidade produzida no ano safra. Assim, o objetivo da pesquisa foi analisar a evolução das principais frutas produzidas em Santa Catarina, entre as safras 2014/15 e 2015/16, como forma de contribuir para estudos e planejamento agrícola e econômico do setor frutícola estadual.

Para a elaboração do trabalho foi utilizada a pesquisa descritiva com delineamento por meio de pesquisa documental e levantamento de dados das safras 2014/15 e 2015/16 executados por meio de coleta e tabulação das informações municipais, referentes as principais produções comerciais do estado catarinense.

A safra de 2015/16

Nas regiões subtropicais de Santa Catarina, do litoral norte e sul e do oeste, no segundo semestre de 2015 as temperaturas foram mais altas que a média. Mas, no final da primavera houve aumento da umidade com temperaturas mais amenas. Já no primeiro semestre de 2016, com temperaturas altas e baixa umidade nas regiões produtoras houve condições para o desenvolvimento das lavouras com aumento da oferta dessas frutas.

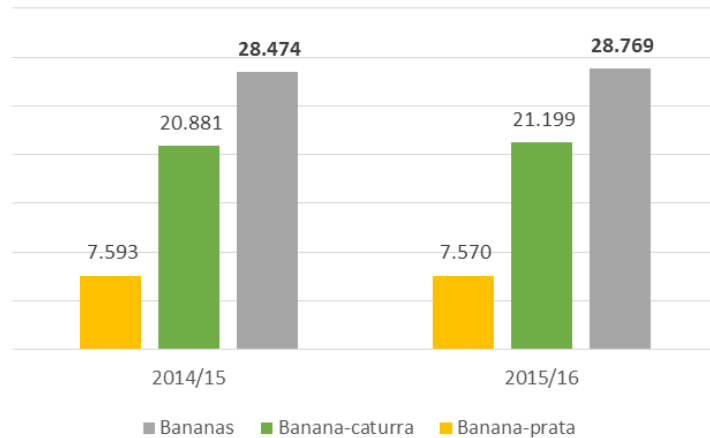

Nas regiões catarinenses de clima temperado, no planalto sul e norte e meio-oeste, no segundo semestre de 2015 houve ocorrência de granizo, geada e excesso de chuvas com altas temperaturas no inverno. A safra foi marcada por perdas nos pomares devido a temperaturas altas no início da frutificação das principais frutas de caroço, uvas e maçãs. No primeiro semestre de 2016 os efeitos dos eventos climáticos afetaram a quantidade produzida e ocasionou deformidades nos frutos aumentando a destinação da produção para a indústria e reduzindo estoques desse tipo de fruta in natura no período.

Resultados - frutas de clima tropical

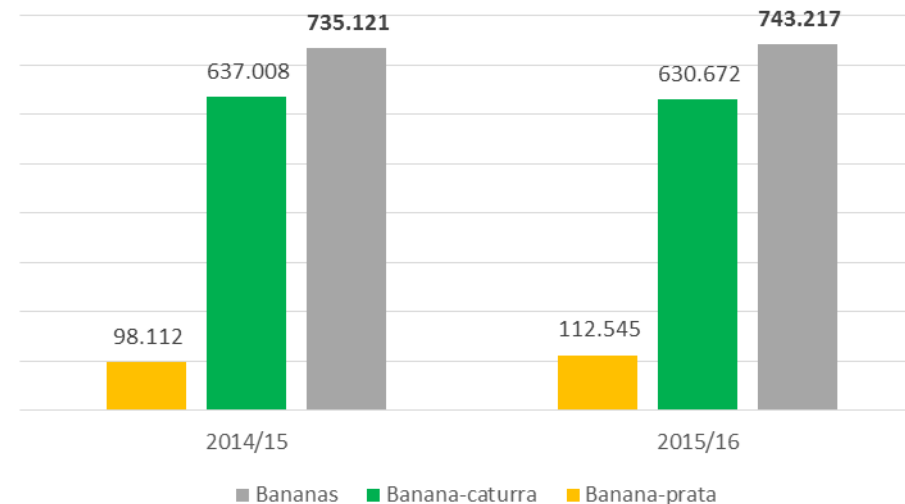

- Bananicultura

- Na safra 2015/16, a bananicultura apresentou aumento de 1,1% na produção e de 1,0% na área colhida entre as safras 2014/15 e 2015/16. A produtividade média foi de 25,8 mil quilos por hectare, com aumento de 0,1%, em uma área média de 8,37 hectare por produtor na safra 2015/16. Houve aumento de 14,7% na produção de banana-prata e redução de 1,0% na de banana-caturra.

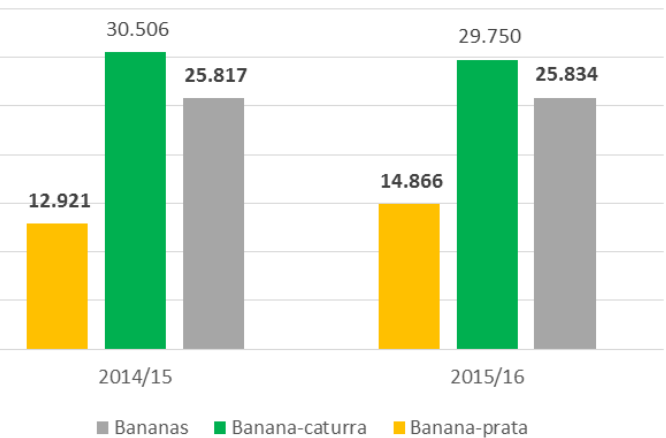

Bananas - Área colhida (ha)

Bananas - Produção (t)

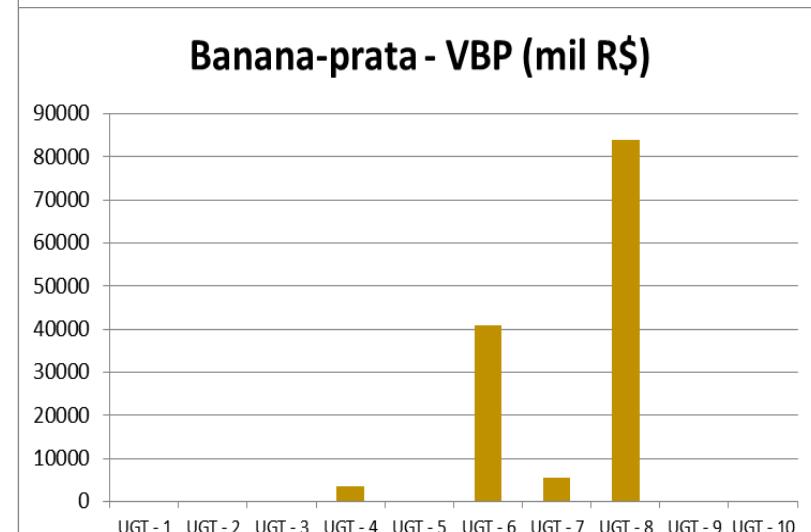

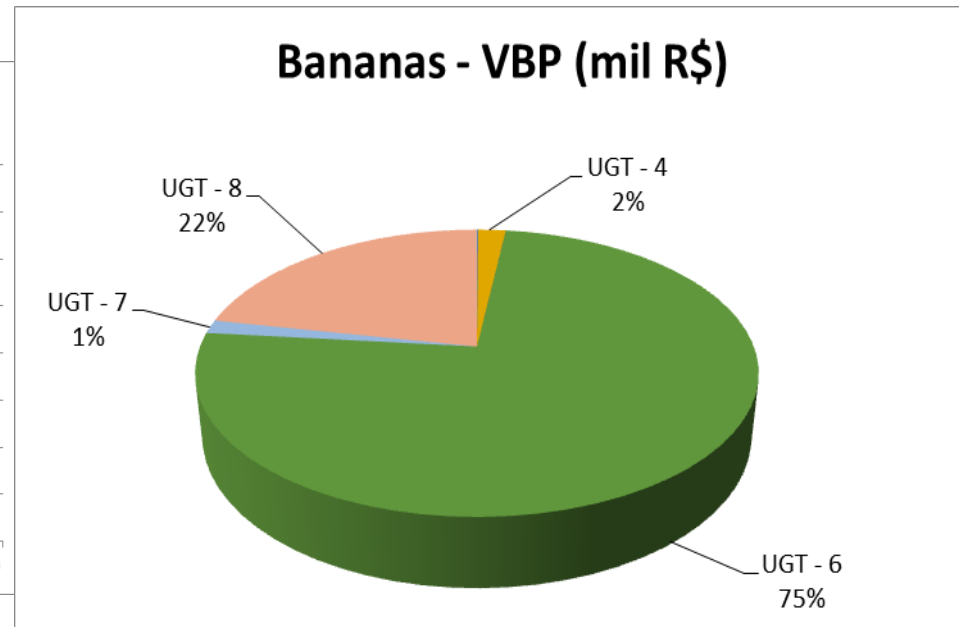

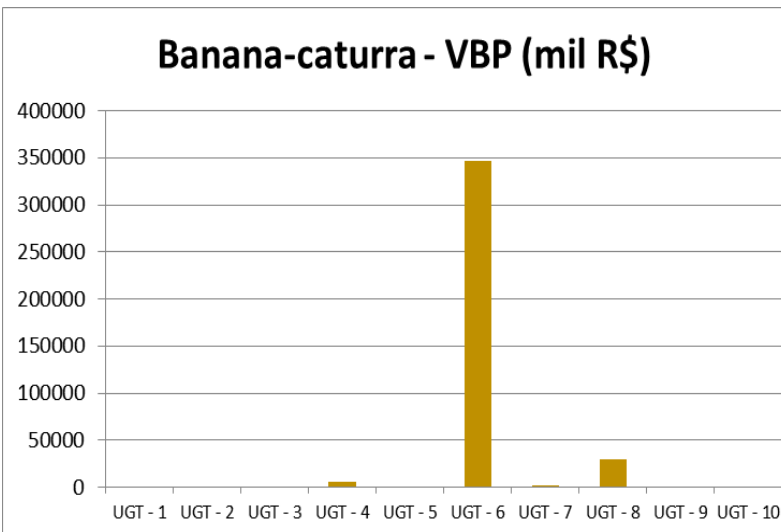

Bananas - Produtividade média (kg/ha)

Resultados - frutas de clima tropical

- Bananicultura

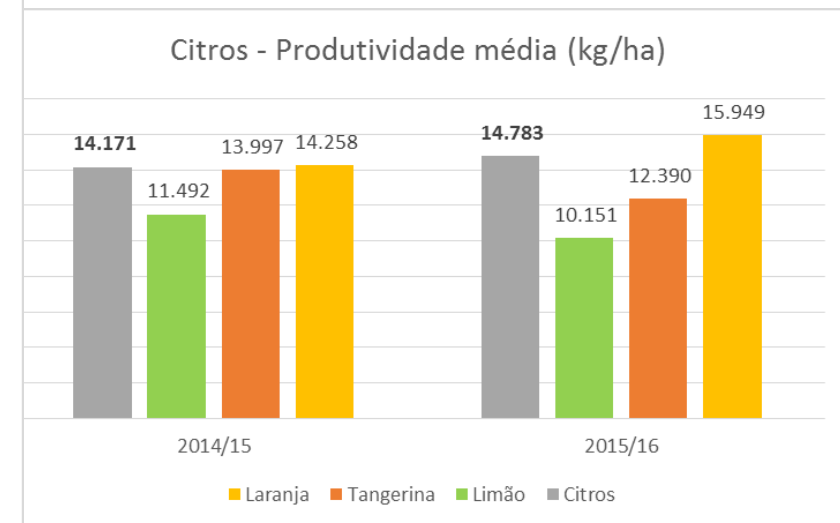

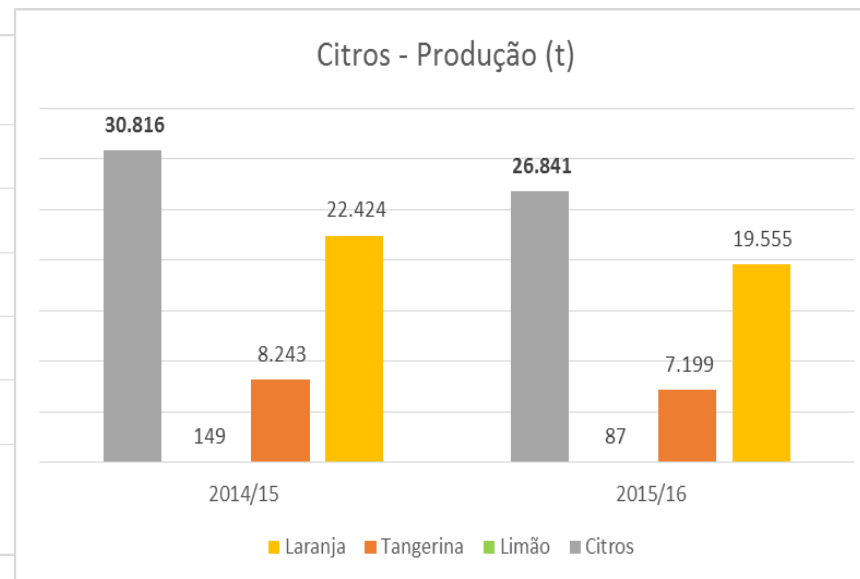

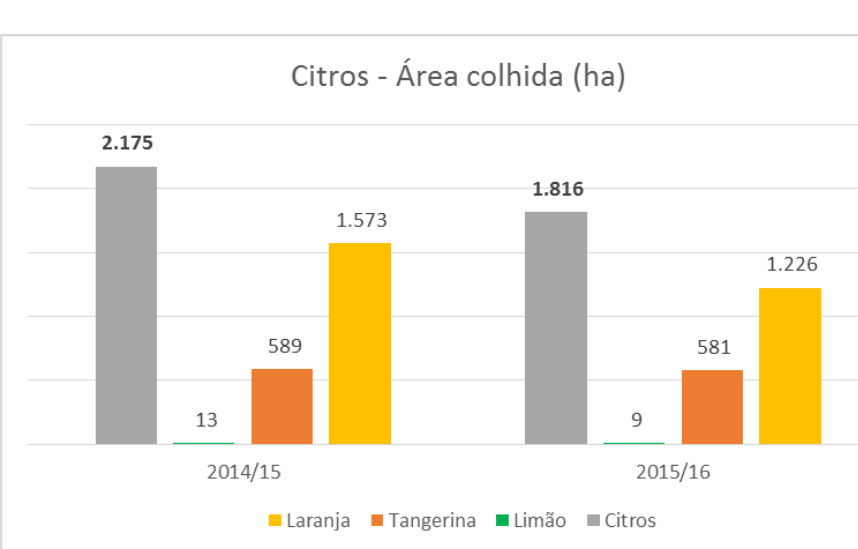

- Na safra 2015/16, a bananicultura apresentou VBP de R\$ 519,2 milhões, sendo 74% de banana-caturra e 26% de banana-prata. O retorno econômico foi de R\$ 18 mil por hectare, sendo R\$ 18,4 mil para banana-caturra e R\$ 17,7 para banana-prata.

Resultados - frutas de clima tropical

- Citricultura

- Na citricultura (laranja, tangerina e limão), entre as safras 2014/15 e 2015/16, houve redução da área colhida e na produção em 16,5% e 12,9%, respectivamente. Na safra 2015/16, a área média (ha) por propriedade foi 1,14 hectare, com produtividade média de 14,7 mil quilos por hectare e 1.756 citricultores.

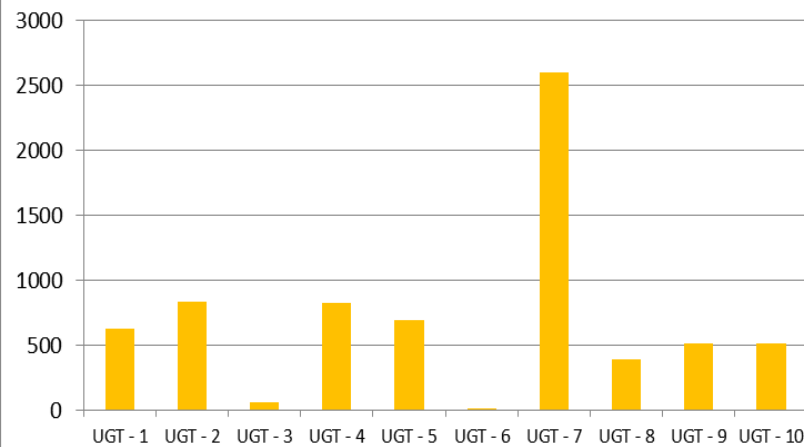

Resultados - frutas de clima tropical

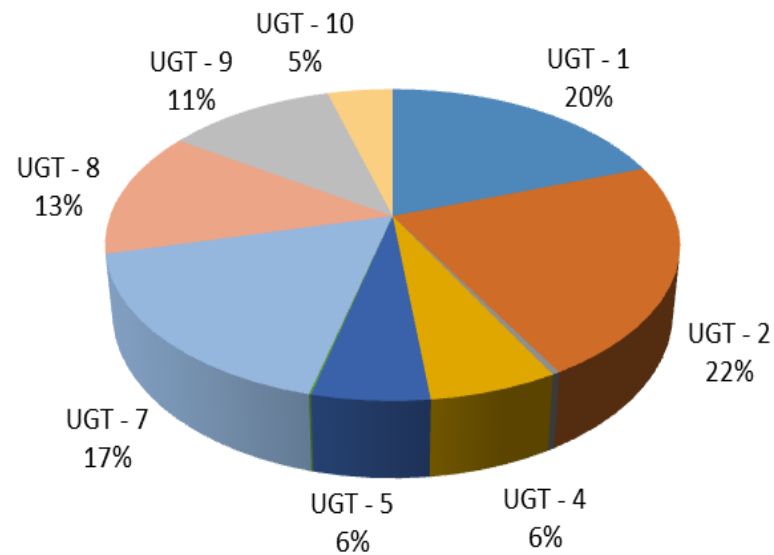

- Citricultura

- Na citricultura a safra 2015/16 apresentou VBP de R\$ 17,0 milhões, sendo 58% de laranja, 42% de tangerina e 1% de limão. O retorno econômico foi de R\$ 9,3 mil por hectare, sendo R\$ 8 mil para a laranja e R\$ 12,2 mil para a tangerina.

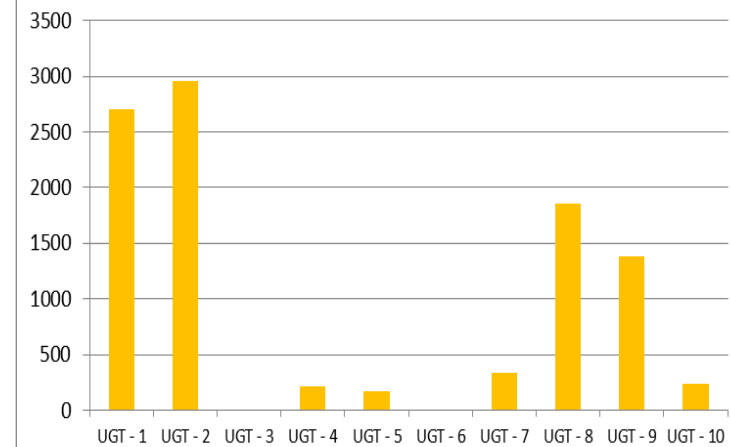

Tangerina - VBP (mil R\$)

Citros - VBP (%)

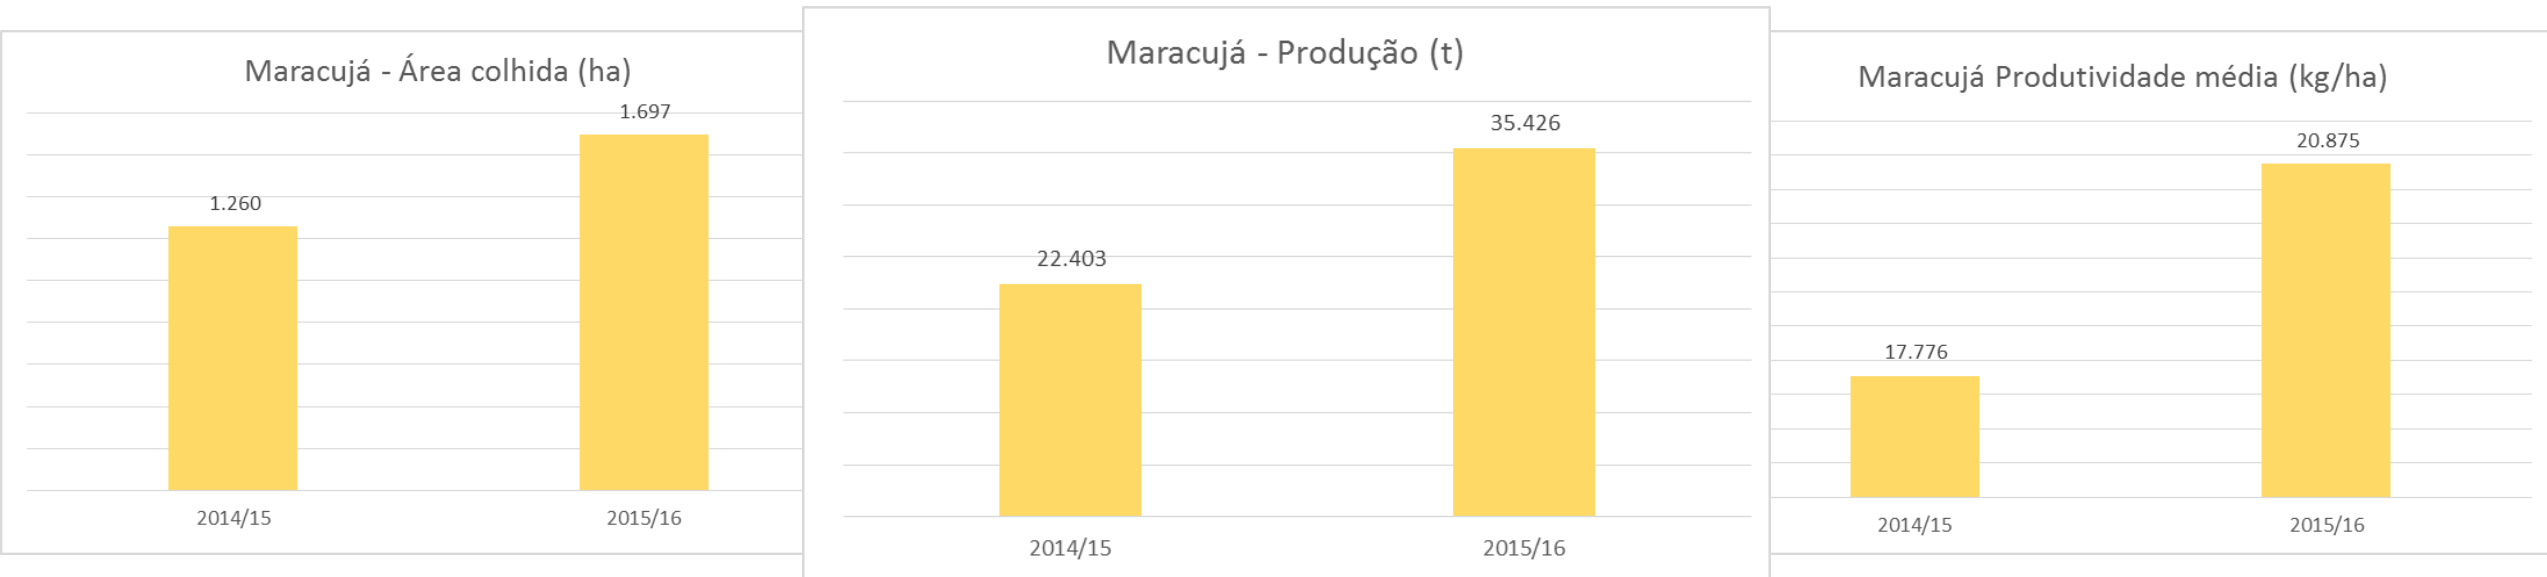

Laranja - VBP (mil R\$)

Resultados - frutas de clima tropical

- Cultura do Maracujazeiro

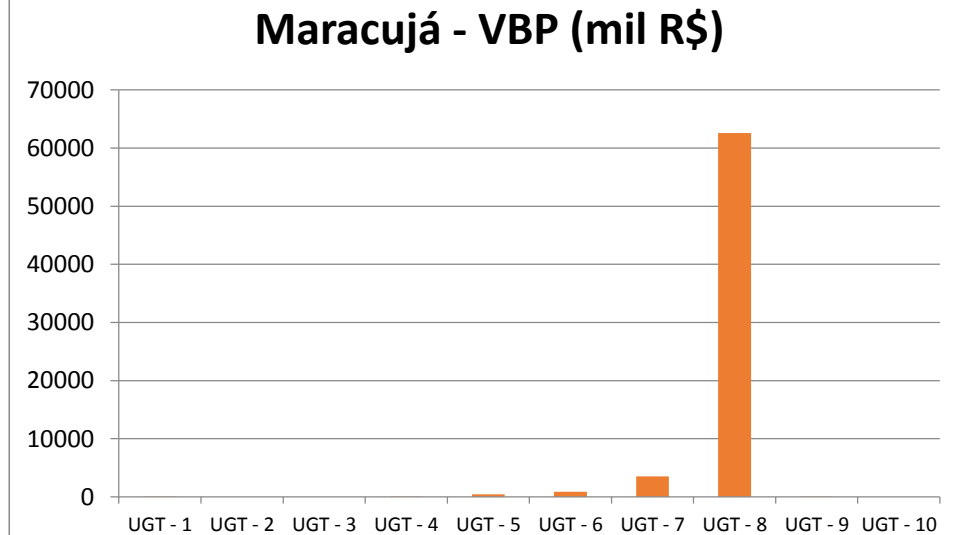

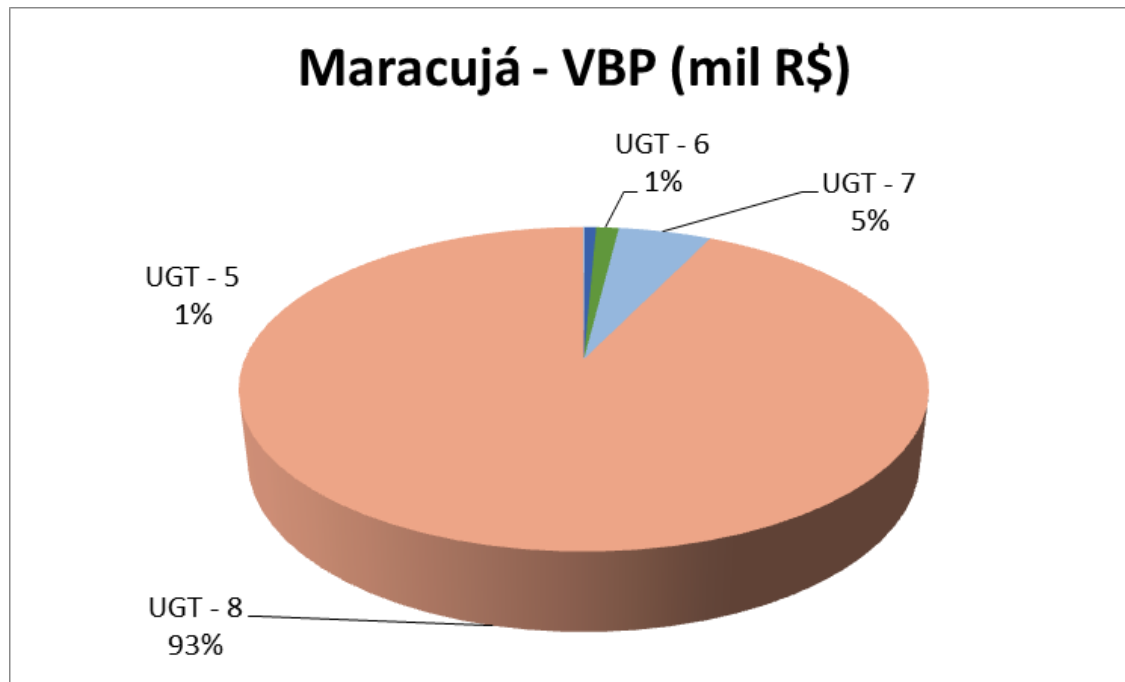

- A cultura do maracujazeiro apresentou aumento de 58,1% na produção e de 34,7% na área colhida entre as safras 2014/15 e 2015/16. A produtividade média foi de 20,8 mil quilos por hectare, com aumento de 17,4%, em uma área média de 2,07 hectare por produtor na safra 2015/16, chegando a 821 fruticultores de maracujá.

Resultados - frutas de clima tropical

- Cultura do Maracujazeiro

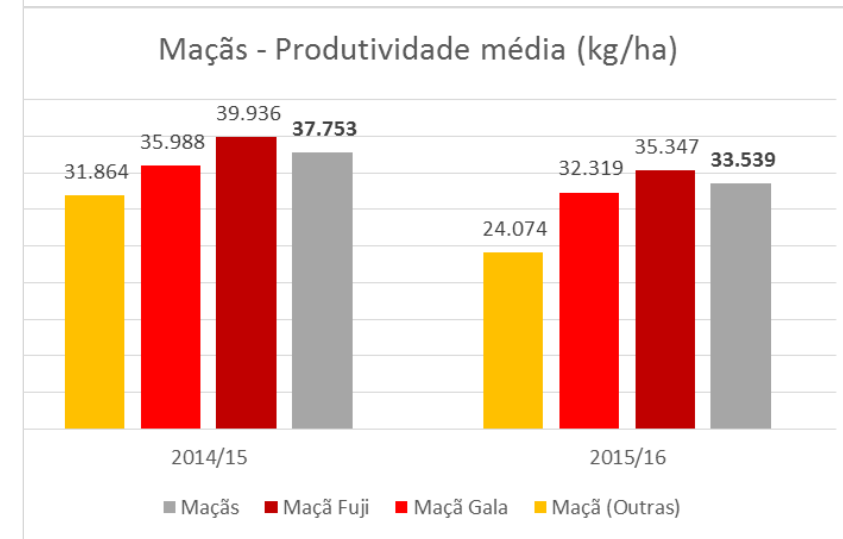

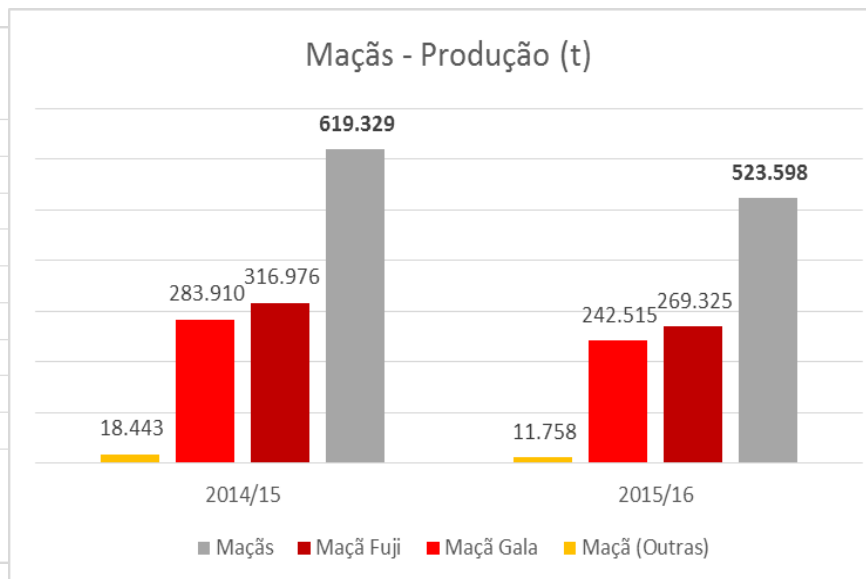

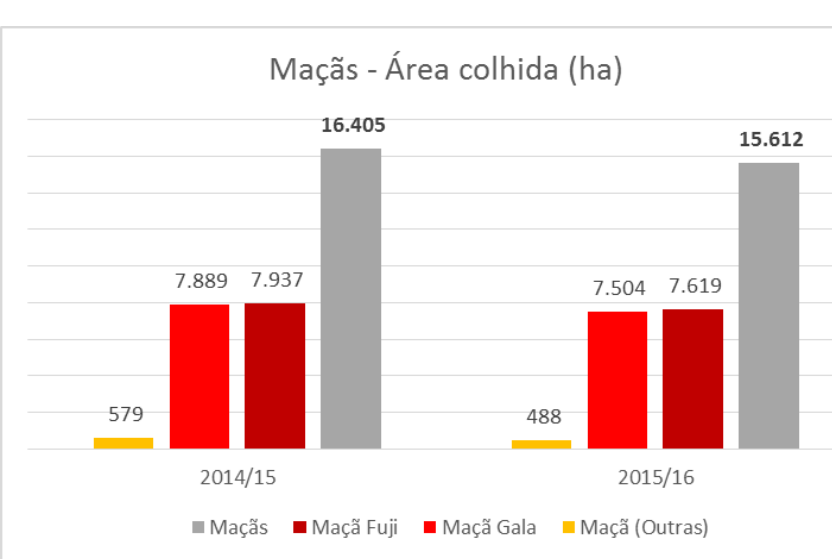

- Na passicultura a safra **2015/16** apresentou **VBP de R\$ 67,3 milhões**. O retorno econômico foi de R\$ 22,7 mil por hectare.

Resultados - frutas de clima temperado

- Maleicultura

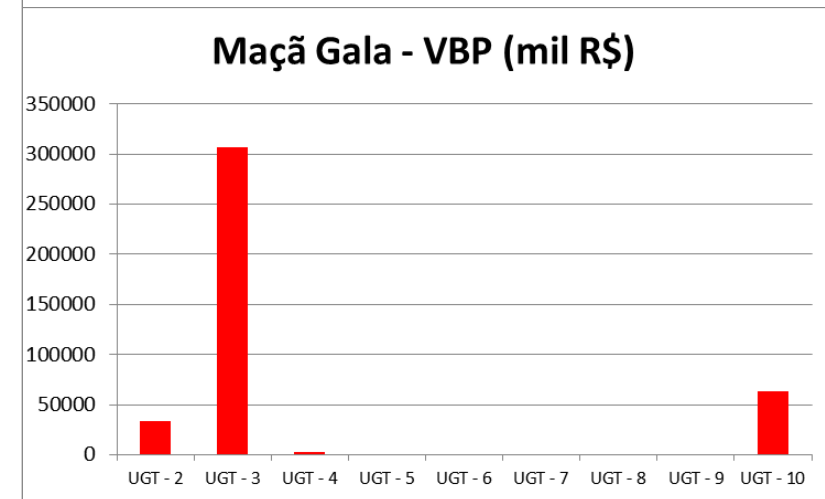

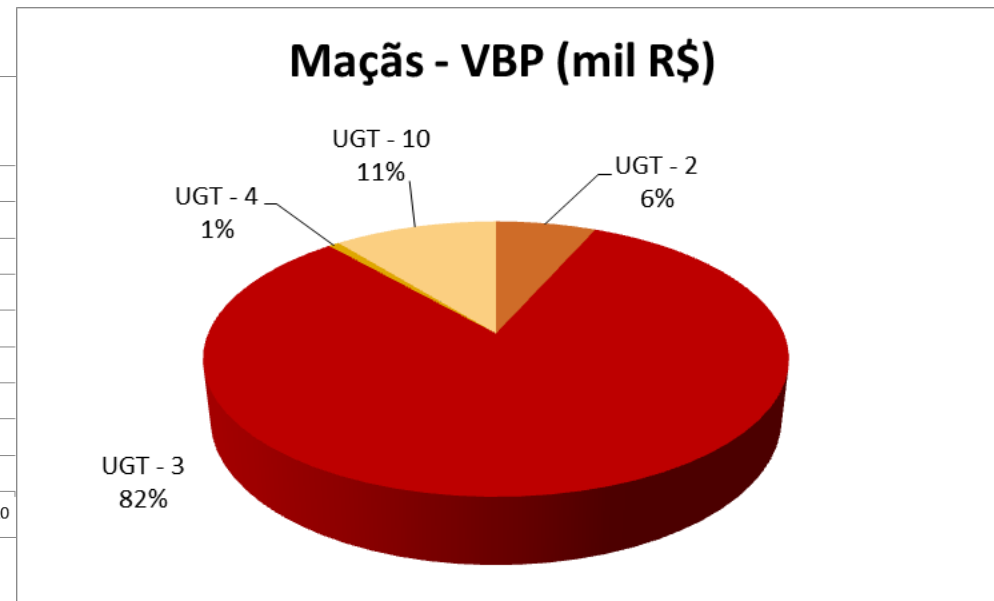

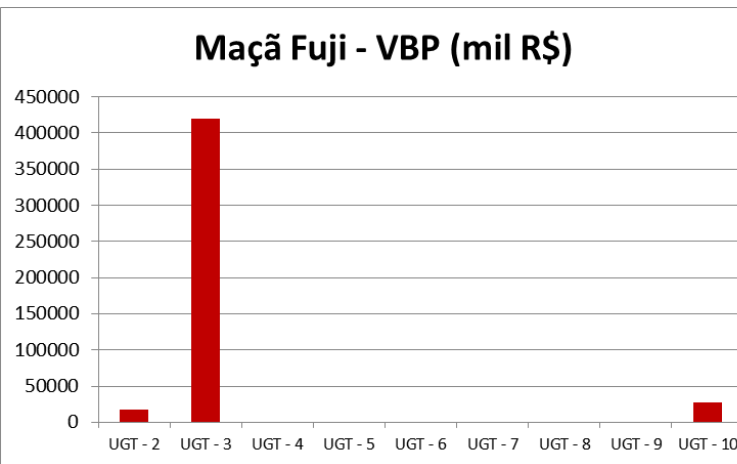

- A maleicultura apresentou diminuição de 15,5% na produção e de 4,8% na área colhida entre as safras 2014/15 e 2015/16. A produtividade média foi de 33,5 mil quilos por hectare, com redução de 11,2%, em uma área média de 6,37 hectare por produtor na safra 2015/16. Houve redução na área colhida de maçã Fuji, maçã Gala e maçãs precoces (outras) de 4%, 4,9% e 15,6%, respectivamente.

Resultados - frutas de clima temperado

- Maleicultura

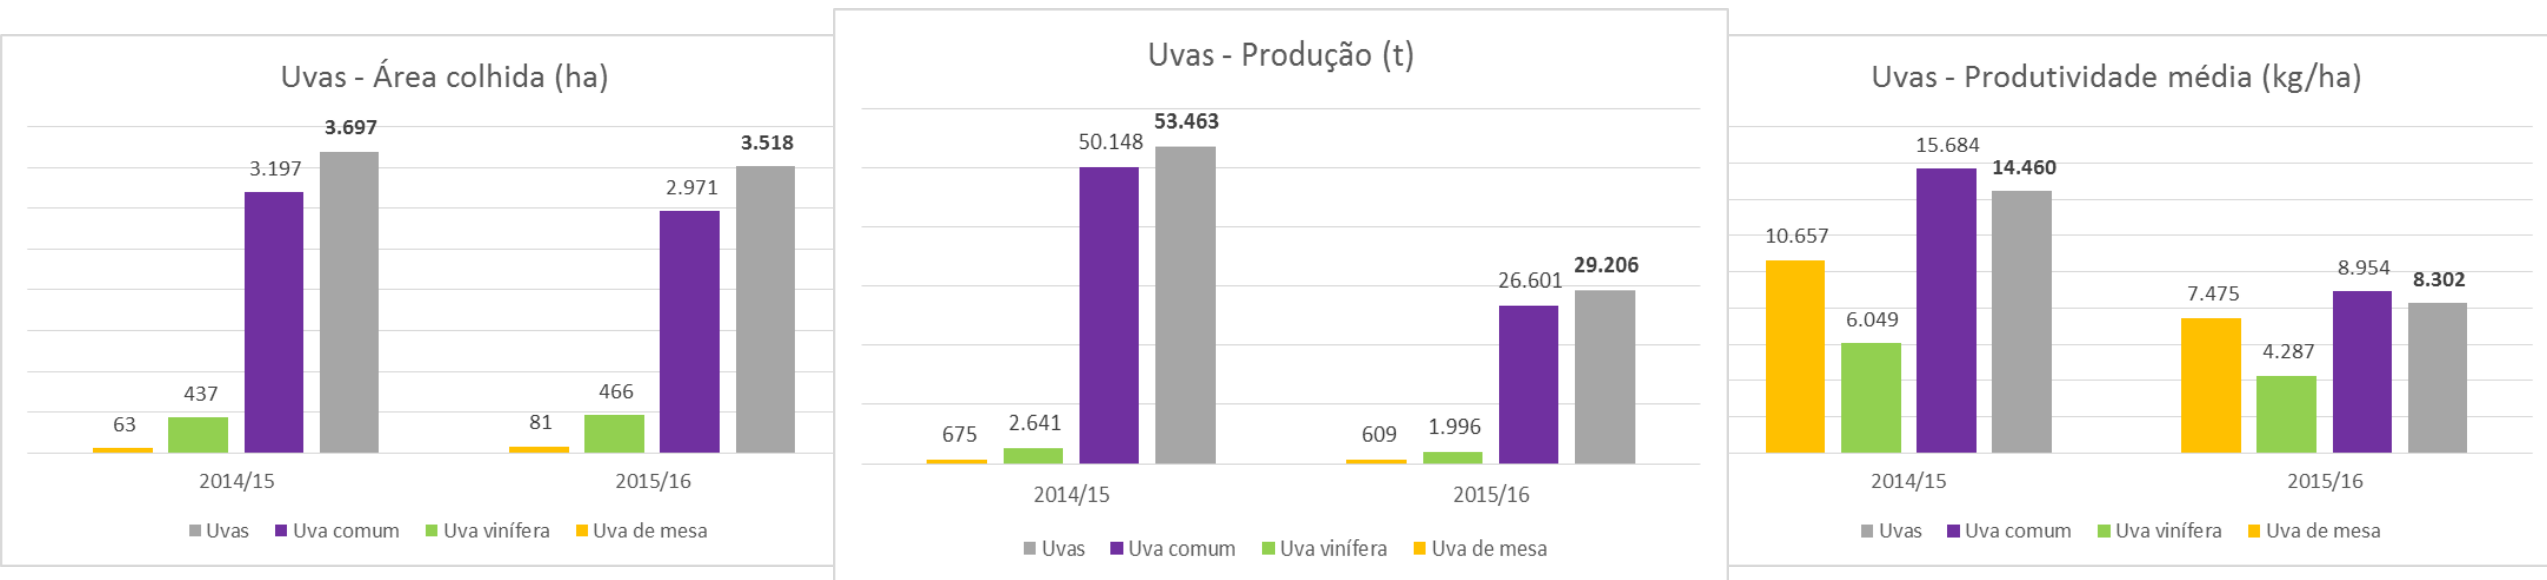

- A maleicultura na safra 2015/16 apresentou VBP de R\$ 891,4 milhões, sendo 52% de maçã Fuji, 46% de maçã Gala e 2% de maçã precoce. O retorno econômico foi de R\$ 57,1 mil por hectare, sendo R\$ 61,1 mil para a maçã Fuji e R\$ 54,2 mil para a maçã Gala.

Resultados - frutas de clima temperado

- Viticultura

- Na viticultura houve redução de 4,8% na área colhida e 45,4% da produção entre as safras 2014/15 e 2015/16. A produção de uva comum reduziu 47,0% com diminuição de 42,9% na produtividade. A uva vinífera teve redução de 24,4% na produção e 29,1% na produtividade. A produção de uva de mesa reduziu 9,8% com diminuição de 28,7% na área colhida no período.

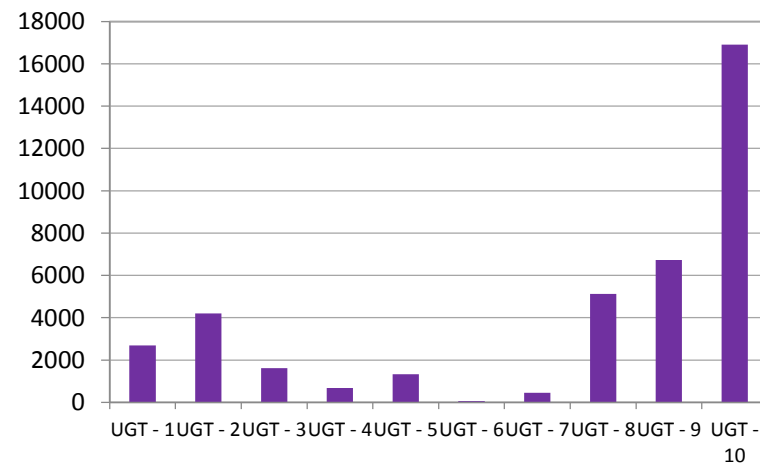

Resultados - frutas de clima temperado

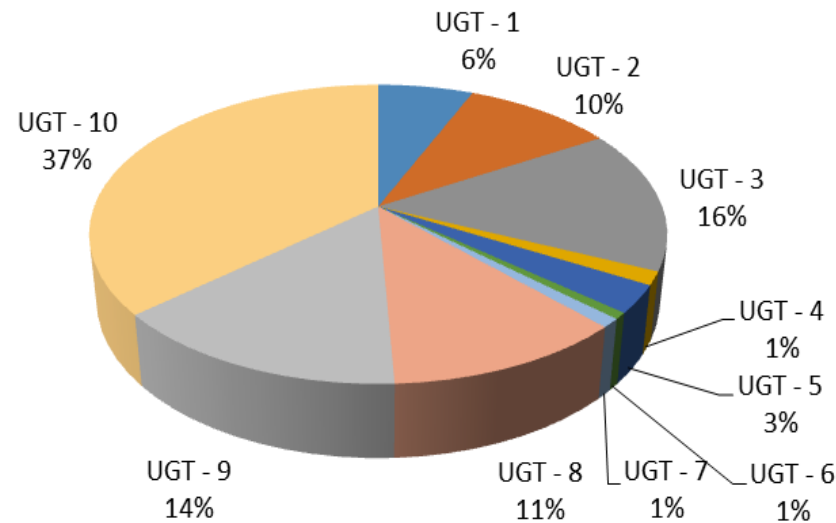

- Viticultura

- Na viticultura na safra 2015/16 apresentou **VBP de R\$ 47,8 milhões, sendo 83% de uva comum, 14% de uva vinífera** e 3% de uva de mesa. O retorno econômico foi de R\$ 13,6 mil por hectare, sendo R\$ 13,4 mil para a uva comum e R\$ 14,1 mil para a uva vinífera.

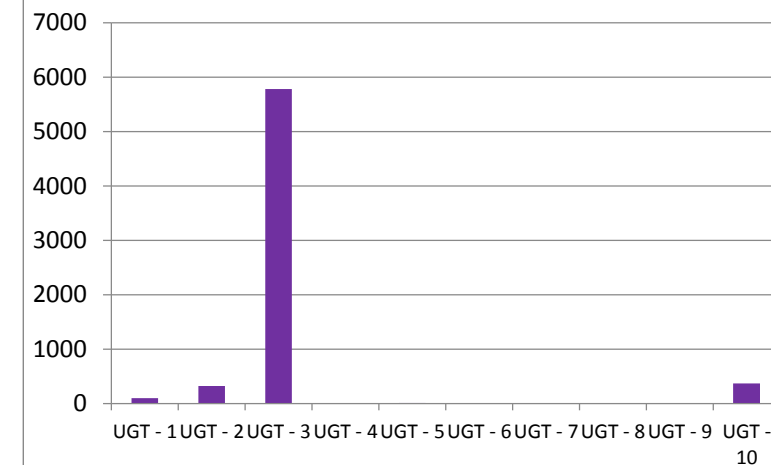

Uva Comum - VBP (mil R\$)

Uvas - VBP (%)

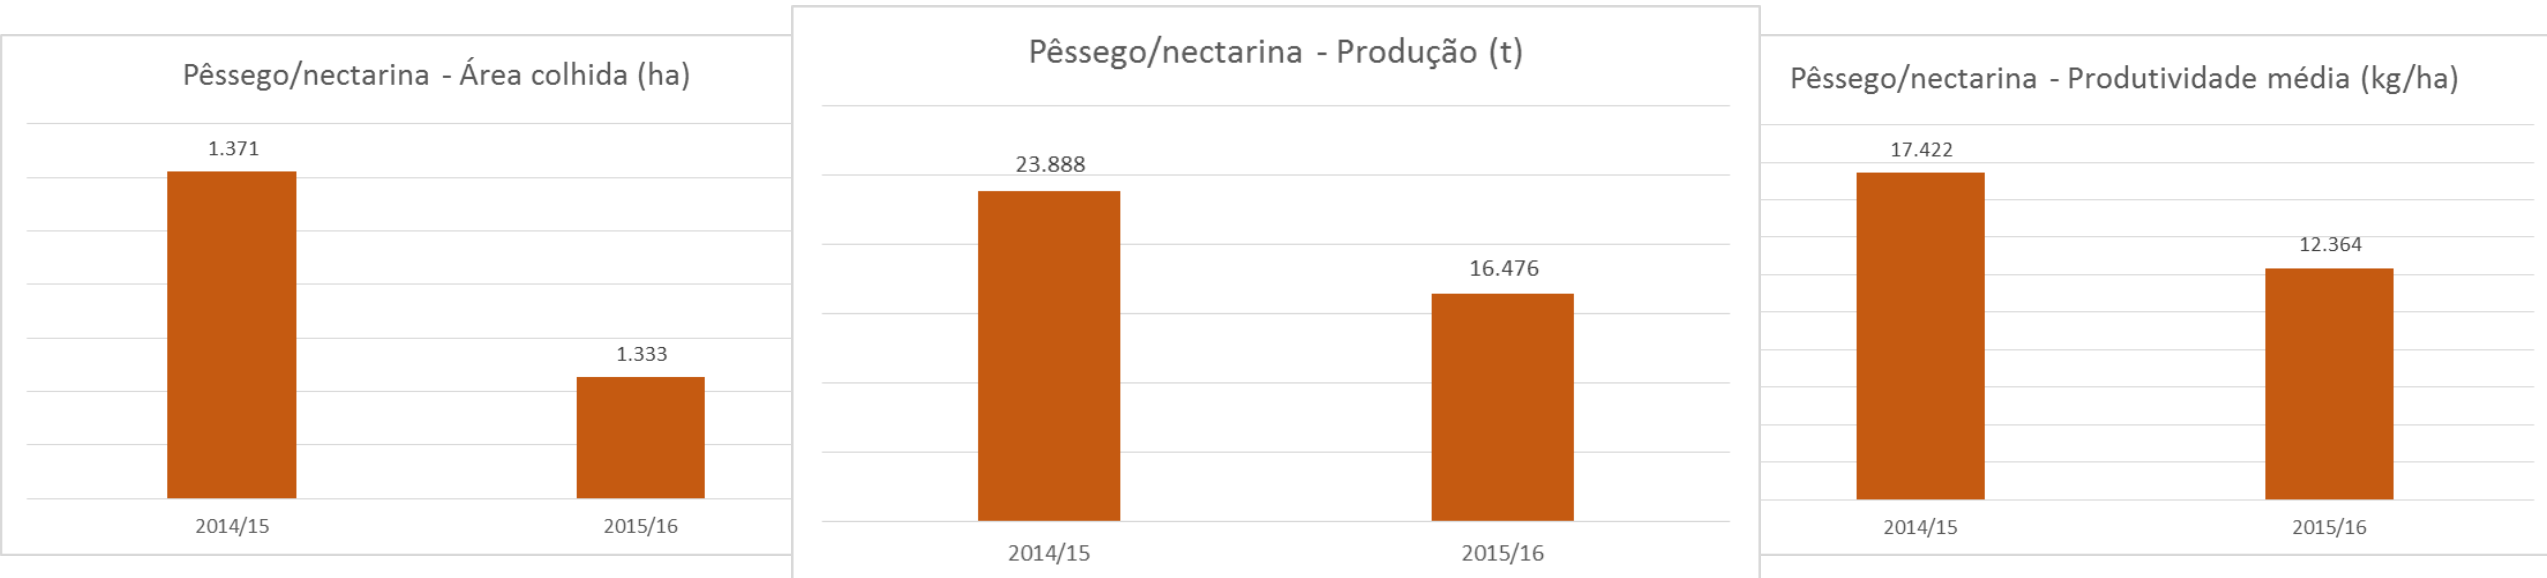

Uva vinífera - VBP (mil R\$)

Resultados - frutas de clima temperado

- Cultura do Pessegueiro e Nectarineiro

- As culturas do pessegueiro e nectarineiro juntas apresentaram redução de 31,0% na produção e de 2,8% na área colhida entre as safras 2014/15 e 2015/16. A produtividade média foi de 12,3 mil quilos por hectare, com redução de 29,0%, em uma área média de 2,04 hectare por produtor na safra 2015/16.

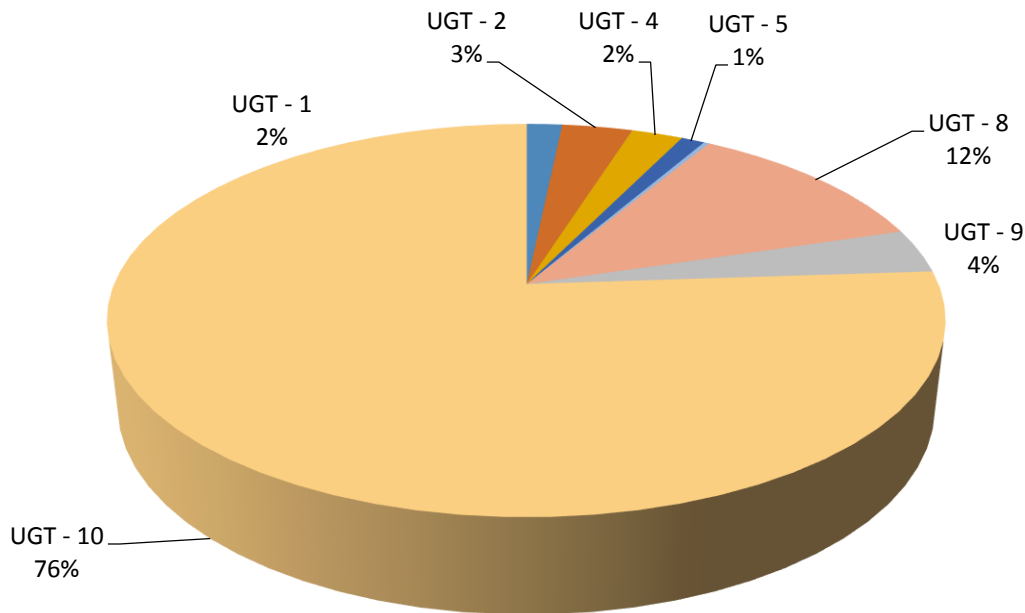

Resultados - frutas de clima temperado

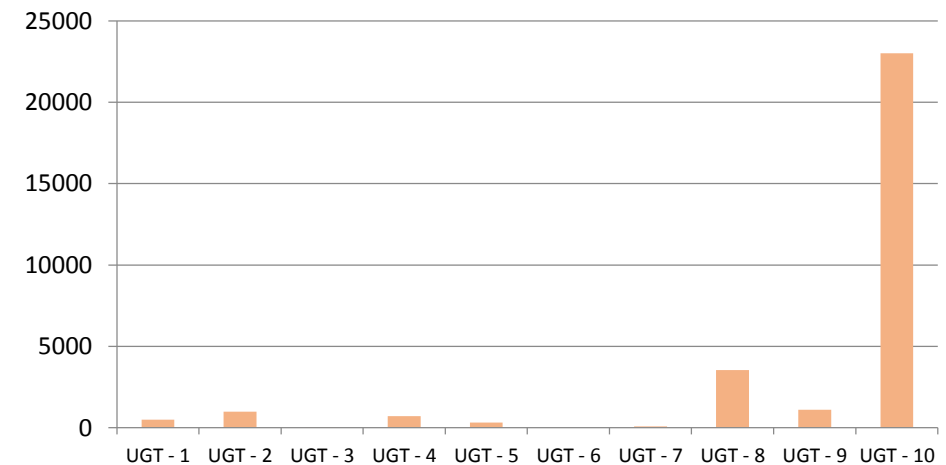

- Cultura do Pessegueiro e Nectarineiro

- As culturas do pessegueiro e nectarineiro na safra 2015/16 apresentou **VBP de R\$ 30,2 milhões**. O retorno econômico foi de R\$ 22,7 mil por hectare.
